Foundation Fundamentals May 29 2020 Guidelines concerning what grantseekers should know about foundations before they ask for money and how to find the facts needed to obtain a grant are presented. There are basically three types of private foundations (independent, operating, and company-sponsored) and one type of public foundation (community foundations) that are of interest to grantseekers. It is suggested that nonprofit organizations should explore their eligibility for federal funding carefully before approaching any other funding source. Corporations give through separately established foundations and through corporate contributions programs operated within their companies. Individuals are also a significant source of funding. Larger foundations differ from small foundations in a number of significant ways, which are of importance to grantees. Data on funding patterns of all foundations by asset categories and grant categories are presented, along with data on assets, grants, and gifts of foundations by state. Suggestions to provide alternative funding possibilities for individuals and organizations that lack official nonprofit status are offered. Specific steps for finding foundations that are in the grantseeker's geographic area and that are interested in the grantseeker's field are examined. Research steps for learning about a foundation and details on the information sources are presented, along with a proposal checklist, and an IRS form for tax exempt private foundations. Appended materials include a sample subject search, geographic searches, a bibliography of area foundation directories, and a list of reference collections operated by the Foundation Center. (SW)

[Foundations of Organizational Strategy](#) Nov 27 2022 Presenting the foundations of an integrated theory of organizations, Jensen argues that the cost of transferring information necessitates decentralization of some decision rights in organizations and economies. This in turn requires organizations to solve the control problem that results when self-interested persons do not behave as perfect agents.

Positive Organizational Scholarship Jul 23 2022 Scholarship establishes a new field of study in the organizational sciences. Just as positive psychology focuses on exploring optimal individual psychological states rather than pathological ones, Positive Organizational Scholarship focuses attention on optimal organizational states --- the dynamics in organizations that lead to the development of human strength, foster resiliency in employees, make healing, restoration, and reconciliation possible, and cultivate extraordinary individual and organizational performance. While the concept of positive organizational scholarship encompasses the examination of typical and even dysfunctional patterns of behavior, it emphasizes positive deviance from expected patterns. Positive Organizational Scholarship examines the enablers, motivations, and effects associated with remarkably positive phenomena --- how they are facilitated, why they work, how they can be identified, and how researchers and managers can capitalize on them. The contributors do not adopt one particular theory or framework but draw from the full spectrum of organizational theories to understand, explain, and predict the occurrence, causes, and consequences of positivity. Positive Organizational Scholarship rigorously seeks to understand what represents the best of the human condition based on scholarly research and theory. This book invites organizational scholars to build upon and extend the positive organizational phenomena being examined. It provides the

definitional, theoretical, and empirical foundations for what will become a cumulative body of enduring work.

Drawdown Jan 25 2020 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, *Vox* “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

How To Be a Successful Philanthropist Jun 10 2021 How To Be a Successful Philanthropist By: Bruce R. Hopkins You want to be a philanthropist. You have the money. You have the drive. You have a cause in mind. What more could there be to it than that? Giving money away is easy, right? Anyone who has done any large amount of charitable giving knows how naïve, and potentially economically disastrous, that mindset really is. The laws and IRS rulings that regulate charitable giving can, and do, fill volumes. If a budding philanthropist isn't careful, he or she can wind up paying as much (or more) in penalties and legal fees as they did to their charity of choice. Just think how much good that money could have done if it were applied correctly. Should you give to an established charity or start one of your own? What's the difference between a public charity, a foundation, and a donor-advised fund? Can you work for your own charity and earn a paycheck? Can your kids? Bruce R. Hopkins has the answers to all of these questions, plus several dozen more that you didn't even know to ask.
