*Cisco Networks* Mar 15 2021 This book is a concise one-stop desk reference and synopsis of basic knowledge and skills for Cisco certification prep. For beginning and experienced network engineers tasked with building LAN, WAN, and data center connections, this book lays out clear directions for installing, configuring, and troubleshooting networks with Cisco devices. The full range of certification topics is covered, including all aspects of IOS, NX-OS, and ASA software. The emphasis throughout is on solving the real-world challenges engineers face in configuring network devices, rather than on exhaustive descriptions of hardware features. This practical desk companion doubles as a comprehensive overview of the basic knowledge and skills needed by CCENT, CCNA, and CCNP exam takers. It distills a comprehensive library of cheat sheets, lab configurations, and advanced commands that the authors assembled as senior network engineers for the benefit of junior engineers they train, mentor on the job, and prepare for Cisco certification exams

Prior familiarity with Cisco routing and switching is desirable but not necessary, as Chris Carthern, Dr. Will Wilson, Noel Rivera, and Richard Bedwell start their book with a review of the basics of configuring routers and switches. All the more advanced chapters have labs and exercises to reinforce the concepts learned. This book differentiates itself from other Cisco books on the market by approaching network security from a hacker's perspective. Not only does it provide network security recommendations but it teaches you how to use black-hat tools such as oclHashcat, Loki, Burp Suite, Scapy, Metasploit, and Kali to actually test the security concepts learned. Readers of Cisco Networks will learn How to configure Cisco switches, routers, and data center devices in typical corporate network architectures The skills and knowledge needed to pass Cisco CCENT, CCNA, and CCNP certification exams How to set up and configure at-home labs using virtual machines and lab exercises in the book to practice advanced Cisco commands How to implement networks of Cisco devices supporting WAN, LAN, and data center configurations How to implement secure network configurations and configure the Cisco ASA firewall How to use black-hat tools and network penetration techniques to test the security of your network

**CCIE Practical Studies** Sep 08 2020 Gain hands-on experience while preparing for the CCIE Security lab exam Master CCIE Security lab exam topics in a real-world setting with advice from CCIE security experts Work through detailed lab scenarios to understand how concepts are applied in real networks Learn how to build practice labs for executing scenarios Master advanced security concepts that you can apply to protect your network The Cisco Certified Internetworking Expert (CCIE) Certification from Cisco Systems is the most prestigious certification in the networking industry. In 2001, Cisco introduced the CCIE in Security. This exam, a combination of a written qualification exam with a one-day intensive lab exam is a highly sought after

affirmation of a networkers security skills. A key to success in the intensive lab exam is hands-on understanding of how the security principles and concepts are executed in a real network. "CCIE Practical Studies: Security (CCIE Self-Study)" provides a series of lab scenarios that help a CCIE candidate or advanced-level networker gain that expertise. The labs show how, with or without a lab of actual equipment, different concepts are applied. Chapters include background and technology overviews, directions on how to set up a practice lab, case study-based scenarios that show the step-by-step implementation of these concepts, and comprehensive labs that mimic those in the one-day lab exam. "CCIE Practical Studies: Security (CCIE Self-Study)" serves as an invaluable guide in gaining networking security experience and in CCIE testing success. Dmitry Bokotey, CCIE No. 4460 holds three CCIE certifications including Security. A senior solution consultant with Cisco Systems, Dmitry is responsible for the design and configuration of complex telecom and CLEC/ILEC customer networks. Andrew G. Mason, CCIE No. 7144 is the CEO of three UK-based companies: Mason Technologies, CCStudy.com, and Boxing Orange. Andrew is also the author of the Cisco Press titles Cisco Secure Virtual Private Networks and Cisco Secure Internet Security Solutions. Raymond Morrow, CCIE No. 4146 is a Solutions Consulting Engineer in the service provider line of business at Cisco Systems. Prior to joining Cisco, Raymond was with Southwestern Bell.
