**Oxford International Primary Science, Stage 1** Apr 27 2022 Oxford International Primary Science takes an enquiry-based approach to learning, engaging students in the topics through asking questions that make them think and activities that encourage them to explore and practise. As students progress through the course, they not only learn about science but how to think like a scientist. They learn the language of scientific enquiry, for example the meaning of observe and predict mean in a scientific context, as well as the important key words for talking about a topic. The topics are explored in careful stages, introducing different aspects at a pace that allows students to absorb and practise what they have learned. Photos, illustrations and diagrams are used to help students explore and understand, and the language is clear and easy for primary children to understand. For the teacher, the Teacher's Guides provide step-by-step notes for each lesson, guiding students through the topic, and supporting students with their language development when needed We are working with Cambridge International Examinations towards endorsement of Oxford International Primary Science

**International Handbook of Cognitive and Behavioural Treatments for Psychological Disorders** Apr 15 2021 This handbook shows the wide perspective cognitive-behavioural treatment can offer to health professionals, the vast majority of whom now recognize that cognitive behavioural procedures are very useful in treating many 'mental' disorders, even if certain disciplines continue to favour other kinds of treatment. This book offers a wide range of structured programmes for the treatment of various psychological/psychiatric disorders as classified by the DSM-IV. The layout will be familiar to the majority of health professionals in the description of mental disorders and their later treatment. It is divided into seven sections, covering anxiety disorders, sexual disorders, dissociative, somatoform, impulse control disorders, emotional disorders and psychotic and organic disorders. Throughout the twenty-three chapters, this book offers the health professional a structured guide with which to start tackling a whole series of 'mental' disorders and offers pointers as to where to find more detailed information. The programmes outlined should, it is hoped, prove more effective than previous approaches with lower economic costs and time investment for the patient and therapist.

Researching and Applying Metaphor in the Real World Oct 02 2022 It has become increasingly clear that metaphor needs to be explored in terms of the social and discourse context in which it is used, especially where the aim is to address real-world problems. The notion of 'real world' metaphor research has been developed to describe this important area of investigation. This book starts by describing the nature and scope of real world metaphor research and then illustrates, through 17 detailed, mainly empirically-based studies, the different areas it can apply to, and different methodologies that can be employed. Research problems are explored in areas such as artificial intelligence, language teaching and learning, reconciliation dialogue, university lecture discourse, poetry and wine description. Methods include corpus analysis, experimentation, discourse analysis, cross-cultural analysis and genre analysis. In each case the empirical studies refer back to Gibbs's opening overview of real-world research. The result is an invaluable and cross-referenced collection of papers addressing real-world problems.

**The Role of Family Physicians in Older People Care** Jan 13 2021 This book provides family doctors with a wealth of evidence-based indications and tips regarding geriatric medicine and approaches for the management of older patients, to be applied in daily practice. After discussing old and new features of healthy ageing and the approaches required in Family Medicine Consultation, the text introduces key elements of geriatric medicine such as frailty, sarcopenia, and the comprehensive geriatric assessment (CGA), before describing a range of characteristics unique to older patients in different contexts, with a dedicated section on Palliative Care. The role of polypharmacy and the importance of quaternary prevention and deprescribing are also addressed. Finally, the book emphasizes both the importance of a humanistic approach in caring and the approach of research and meta-research in geriatrics. Though many texts explore the role of primary care professionals in geriatric medicine, the role of family doctors in older people care has not yet been clearly addressed, despite the growing burden of ageing, which has been dubbed the “silver tsunami.” Family physicians care for individuals in the context of their family, community, and culture, respecting the autonomy of their patients. In negotiating management plans with their patients, family doctors integrate physical, psychological, social, cultural and existential factors, utilizing the knowledge and trust engendered by repeated visits. They do so by promoting health, preventing disease, providing cures, care, or palliation and promoting patient empowerment and self-management. This will likely become all the more important, since we are witnessing a global demographic shift and family doctors will be responsible for and involved in caring for a growing population of older patients. This book is intended for family medicine trainees and professionals, but can also be a useful tool for geriatricians, helping them to better understand some features of primary care and to more fruitfully interact with family doctors.
