[Ask a Science Teacher](#) Sep 08 2020 Fun and fascinating Q&As on topics from astronomy to zoology: "A treasure." —Library Journal We've all grown so used to living in a world filled with wonders that we sometimes forget to wonder about them: What creates the wind? Do fish sleep? Why do we blink? All too often, the explanations remain shrouded in mystery—or behind a haze of technical language. For kids of all ages—or those of us who should have raised our hands in science class but didn't—Larry Scheckel comes to the rescue. An award-winning science teacher and longtime columnist for his local newspaper, Scheckel is a master explainer with a trove of knowledge. Just ask the students and devoted readers who've spent years trying to stump him! In *Ask a Science Teacher*, Scheckel collects 250 of his favorite Q&As and provides refreshingly uncomplicated explanations. You'll learn how planes really fly, why the Earth is round, how microwaves heat food, and much more on topics including: The Human Body \* Earth Science \* Astronomy \* Chemistry \* Physics \* Technology \* Zoology \* Music and conundrums that don't fit into any category "For any curious minded reader—young or old." —Publishers Weekly

**Investigative Science Learning Environment** Jun 29 2022 The goal of this book is to introduce a reader to a new philosophy of teaching and learning physics - Investigative Science Learning Environment, or ISLE (pronounced as a small island). ISLE is an example of an "intentional"

approach to curriculum design and learning activities (MacMillan and Garrison 1988 A Logical Theory of Teaching: Erotetics and Intentionality). Intentionality means that the process through which the learning occurs is as crucial for learning as the final outcome or learned content. In ISLE, the process through which students learn mirrors the practice of physics.

**Personality development of prospective mathematics teachers** Sep 01 2022 The publication focuses on pre-service teachers' beliefs as the key prerequisite for teaching mathematics. This construct is considered an inseparable part of the teacher's personality, which needs to be positively shaped during undergraduate training. The theoretical part shows its correlation with other psychological determinants such as motivation, perceived self-efficacy, or attitudes. The construct is also placed in an educational context. The empirical part describes the results of the research and provides specific suggestions for undergraduate teacher training.

**For Better or For Worse? Collaborative Couples in the Sciences** Jan 31 2020 In this volume, a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences, with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice. Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit, the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced, heterosexual and homosexual, aristocratic and working-class and politically right and left. The contributors analyze cases shaped by their particular geographical locations, ranging from retreat settings like the English countryside and Woods Hole, Massachusetts, to university laboratories and urban centers in Berlin, Stockholm, Geneva and London. The volume demonstrates how the terms and meanings of collaboration, variably shaped by disciplinary imperatives, cultural mores, and the agency of the collaborators themselves, illuminate critical intellectual and institutional developments in the modern sciences.

**Alchemy and Chemistry in the 16th and 17th Centuries** Jan 01 2020 The present volume owes its origin to a Colloquium on "Alchemy and Chemistry in the Sixteenth and Seventeenth Centuries", held at the Warburg Institute on 26th and 27th July 1989. The Colloquium focused on a number of selected themes during a closely defined chronological interval: on the relation of alchemy and chemistry to medicine, philosophy, religion, and to the corpuscular philosophy, in the sixteenth and seventeenth centuries. The relations between Medicina and alchemy in the Lullian treatises were examined in the opening paper by Michela Pereira, based on researches on unpublished manuscript sources in the period between the 14th and 17th centuries. It is several decades since the researches of R.F. Multhauf gave a prominent role to Johannes de Rupescissa in linking medicine and alchemy through the concept of a quinta essentia. Michela Pereira explores the significance of the Lullian tradition in this development and draws attention to the fact that the early Paracelsians had themselves recognized a family resemblance between the works of Paracelsus and Roger Bacon's scientia experimentalis and, indeed, a continuity with the Lullian tradition.
