Metabolic Syndrome Oct 31 2019 This comprehensive reference work edited by one of the leading authorities on obesity presents an up-to-date survey of the current scientific understanding of the metabolic syndrome, as well as an overview of the most significant changes to the field over the past 30 years. This volume is a thorough reference for obesity and the metabolic syndrome and will prove an indispensable resource for clinicians and researchers at levels worldwide. The obesity epidemic has generated immense interest in recent years due to the wide-ranging and significant adverse health and economic consequences that surround the problem. Much attention has been focused on behaviors that lead to obesity, in particular to over consumption of energy-dense food and to sedentary lifestyle. However, obesity is an extremely complex condition with poorly defined pathogenesis. In addition, when combined with other comorbidities such as hypertension and dyslipidemia, obesity often leads to a patient diagnosis of metabolic syndrome, a very troubling condition that has grown, and is continuing to grow, rapidly each year in prevalence worldwide. Metabolic syndrome is a cluster of conditions – increased blood pressure, a high blood sugar level, excess body fat around the waist and abnormal cholesterol levels – that occur together, increasing one's risk of heart disease, stroke and diabetes. This resource covers the full range of scientific and clinical aspects: epidemiology, genetics, environmental factors, pathophysiology, diseases associated with obesity, and clinical management.

The Visual Turn and the Transformation of the Textbook Dec 02 2019 Is the emerging digital multimedia culture of today transforming the textbook or forever displacing it? As new media of transmission enter the classroom, the traditional textbook is now caught up in a dialogue reshaping the textual boundaries of the book, and with it the traditional modes of cognition and learning, which are bound more to language than to visual form. Most of the important work in the past two decades in the field of curriculum has focused on the culture of the textbook. A rich literature has evolved around textbooks as the traditional object of instructional activity. This volume is an important contribution to this literature, which focuses on the actual making of a textbook. This design process serves as a metaphor that suggests new paradigms of learning and instruction, in which text content is but one component in a multidimensional information space. *The Visual Turn* is an exploration along the border of this new learning space transforming the traditional center of instruction in the classroom.
